Fund Manager Commentary

Gilt yields declined earlier as the Bank of England opted to maintain its base rate and as fears grew around the latest COVID variant. Market participants therefore moved to factor in a slower pace of monetary tightening. Whilst upside risks to inflation are now acknowledged as less temporary, global central bank reluctance to alter present settings remains. With risky assets selling off as safe-haven demand took hold, credit spreads rose considerably. The 10-year yield began the period at 1.03% and rose to 1.08% before falling to close at the low of 0.81%.

The EdenTree Sterling Bond Fund's total return of 0.35% outperformed its IA strategic bond fund peer group (0%) but was behind that of its iBoxx Non-Gilts benchmark (1.12%). Whilst rising risk premia, notably on subordinated debt in the financial sector adversely impacted performance, the main detractor was its shorter relative duration position as longer-dated gilts rallied sharply.

Robust cash inflows were deployed to initiate a position in the newly-issued Charities Aid Foundation 3.5% 2031 retail charity bond as well as to add to existing holdings in Close Brothers 2% 2031 (2026 call), Yorkshire Building Society 1.5% 2029, National Express Group 2.375% 2028 and Assura 1.625% 2033 sustainable bond.

Yield figures are as at 30/11/2021. Rounding may cause small differences in percentages included in this document.

*Past 12 months' distributions as a % of midshare price, excluding preliminary charge.

**We compare the fund's performance to the iBoxx Sterling Non-Gilt Overall Return Index, however the portfolio manager is not bound or influenced by the index when making investment decisions.

***The Distribution Yield reflects the amounts that may be expected to be distributed over the next 12 months as a percentage of the mid-market unit price of the fund. The Underlying Yield reflects the annualised income net of expenses of the fund (calculated in accordance with relevant accounting standards) as a percentage of the midmarket unit price of the fund. Both Yields are based on a snapshot of the portfolio on that day. The yields do not include any preliminary charge and investors may be subject to tax on distributions. The Distribution Yield is higher than the Underlying Yield because the fund's expenses are charged to capital. This has the effect of increasing the distributions for the year and constraining the fund's capital performance to an equivalent extent.

†AMC is charged to capital for all share classes of this fund which could constrain the potential growth of your investment.
